Module A

Reading & Writing

Reading comprehension skills:

- Reading for specific information.
- Guessing meaning of words.
- Answering questions.

01

Promoting women in science to reach our full potential

CIAT/Neil Palmer

A worker at the Agrobiodiversity Research Area of the International Center for Tropical Agriculture (CIAT) holds a seedling plant in a glass vial.

Match the words to the definitions.

Unconscious

Perpetuate

Transformative

Disparity

Systemic

1. Definition: A great difference; a lack of equality or similarity, especially in a way that is unfair or concerning.
2. Definition: Relating to or affecting a whole system, rather than just a part of it; fundamental or ingrained in a system.
3. Definition: To make something continue, especially something bad or undesirable.
4. Definition: Done or happening without being aware of it; not deliberate or intentional.
5. Definition: Causing or able to cause a major change, especially a positive one.

Joint message from Ms Sima Bahous, Executive Director of UN Women and Ms Audrey Azoulay, Director-General of UNESCO on the occasion of the International Day of Women and Girls in Science, 11 February.

9 February 2022

The major challenges the world faces today, from COVID-19 to climate change, need our brightest scientific minds to solve them. However, only one in three scientists is a woman. This glaring disparity does not just hamstring our ability to find solutions to our common challenges, it keeps us from building the societies we need. And the disparity is systemic.

Women also remain underrepresented among senior scientists in academia. According to the 2021 UNESCO Science Report, they are awarded less research funding than men, and are less likely to be promoted. In the private sector too, women are less present in company leadership and in technical roles in tech industries. The lack of equal opportunities in the workplace is driving women out of research professions.

We must put the principle of equality into action so that science works for women, because it works against them all too often – for example, when algorithms perpetuate the biases of their programmers. Despite a labor shortage in this field, studies have shown that women account for just 22% of professionals working in artificial intelligence and 28 per cent of engineering graduates. And when they found their own start-ups, women receive less than 3 per cent of total venture capital compared to men.

The first step to change this is to provide more opportunities in science and innovation to women. That is why UNESCO and UN Women strive to get girls into science education, and to ensure their rightful place in these professions and industries.

Last year, the Generation Equality Forum launched the Action Coalition on Technology and Innovation for Gender Equality. Its aim is to double the proportion of women working in technology and innovation by 2026 and ensure that women and girls participate fully in finding solutions to the large, complex and interdisciplinary problems we face. Doing that requires positive remedies for increased representation, as well as constant vigilance to uproot long-standing discrimination and unconscious bias.

We are already seeing how working together across the public and private sectors and across generations can bring about positive change, such as by eliminating gender stereotypes in education and putting policies in place to attract and support women scientists in the workforce.

Science derives from the universal curiosity that makes us human, asking the questions that are common to us all. We urgently need it to build more inclusive, transformative and accountable science and technology ecosystems that are free of biases and discrimination. In so doing, we will be able to accelerate the Sustainable Development Goals, and address the challenges that impact us all.

Choose the correct answer to the following questions.

1 According to the text, what is the current proportion of women in scientific roles?

- a More than half of all scientists
- b Only one in three scientists
- c About 50% of scientists
- d Less than one in ten scientists

2 What challenge do women face in the scientific workplace, according to the text?

- a Lack of scientific training
- b Limited access to technology
- c Less research funding and fewer promotions
- d Insufficient educational opportunities

3 What is the primary goal of the Generation Equality Forum's Action Coalition?

- a To eliminate gender stereotypes completely
- b To double women's participation in technology by 2026
- c To increase women's salaries in tech
- d To create more science education programs

4 How does the text describe the current representation of women in artificial intelligence?

- a Women dominate the field
- b Women make up exactly 50% of professionals
- c Women account for 22% of AI professionals
- d Women are the majority of AI graduates

5 What broader impact do the authors suggest comes from increasing women's participation in science?

- a Increased global economic productivity
- b Solving complex global challenges more effectively
- c Reducing overall unemployment rates
- d Improving educational systems worldwide

6 How do the authors view the current state of gender representation in scientific fields?

- a The situation is completely hopeless
- b Gender disparities are systemic and need active intervention
- c Women are naturally less interested in science
- d The problem will resolve itself over time

7 What underlying principle do the authors emphasize about scientific curiosity?

- a Science is only for highly intelligent people
- b Scientific curiosity is limited to specific genders
- c Science stems from universal human curiosity
- d Only professional scientists can ask meaningful questions

A close-up portrait of a woman with long dark hair and black-rimmed glasses. Her face is the central focus, but it's overlaid with a complex digital aesthetic. The background behind her is a dark, blurry city street at night, with lights from buildings and cars visible. Overlaid on the right side of her face and the background is a semi-transparent grid containing lines of white text, resembling computer code or data logs. The overall mood is tech-oriented and futuristic.

02

You and your data.

Match the words to the definitions.

data

to be aware of

consent

to keep track / to track

a scandal

targeted

to regulate

to compromise

1. directed at a particular person or group.
2. permission to do something.
3. to risk having a harmful effect on something.
4. to control an activity or process, especially with rules.
5. information, especially facts or numbers, that is collected for a future purpose.
6. to study or record someone's behavior over time.
7. to have noticed or know about something.
8. a public feeling of shock and disapproval.

As the internet and digital technology become a bigger part of our lives, more of our data becomes publicly accessible, leading to questions about privacy. So, how do we interact with the growing digital world without compromising the security of our information and our right to privacy?

Imagine that you want to learn a new language. You search 'Is German a difficult language?' on your phone. You click on a link and read an article with advice for learning German. There's a search function to find German courses, so you enter your city name. It asks you to activate location services to find courses near you. You click 'accept'. You then message a German friend to ask for her advice. When you look her up on social media, an advertisement for a book and an app called German for Beginners instantly pops up. Later the same day, while you're sending an email, you see an advert offering you a discount at a local language school. How did they know? The simple answer is **online data**. At all stages of your search, your devices, websites and applications were collecting data on your preferences and tracking your behavior online. 'They' have been following you.

Who uses our data and why?

In the past, it was easy for people to keep track of their personal information. Like their possessions, people's information existed mostly in physical form: on paper, kept in a folder, locked in a cupboard or an office. Today, our personal information can be collected and stored online, and it's accessible to more people than ever before. Many of us share our physical location, our travel plans, our political opinions, our shopping interests and our family photos online – as key services like ordering a takeaway meal, booking a plane, taking part in a poll or buying new clothes now take place online and require us to give out our data.

Every search you make, service you use, message you send and item you buy is part of your 'digital footprint'. Companies and online platforms use this 'footprint' to track exactly what we are doing; from what links we click on to how much time we spend on a website. Based on your online activity, they can guess what you are interested in and what things you might want to buy. Knowing so much about you gives online platforms and companies a lot of power and a lot of money. By selling your data or providing targeted content, companies can turn your online activity into profit. This is the foundation of the growing industry of digital marketing.

Can you protect your data?

Yes ... and no!

Some of the time our personal data is shared online with our consent. We post our birthday, our photographs and even our opinions online on social media. We know that this information is publicly accessible. However, our data often travels further than we realize, and can be used in ways that we did not intend. Certain news scandals about data breaches, where personal data has been lost, leaked or shared without consent, have recently made people much more aware of the potential dangers of sharing information online.

So, can we do anything to protect our data? Or should we just accept that in fact nothing is 'free' and sharing our data is the price we have to pay for using many online services? As people are increasingly aware of and worried about data protection, governments and organizations are taking a more active role in protecting privacy. For example, the European Union passed the General Data Protection Law, which regulates how personal information is collected online. However, there is still much work to be done.

As internet users, we should all have a say in how our data is used. It is important that we pay more attention to how data is acquired, where it is stored and how it is used. As the ways in which we use the internet continue to grow and change, we will need to stay informed and keep demanding new laws and regulations, and better information about how to protect ourselves.

Read the statements and choose the correct option.

1 What is the main concern discussed in the text about digital technology?

- a The cost of online services
- b Privacy and data protection
- c Learning new languages online
- d Digital marketing strategies

2 How do companies use people's online data?

- a To improve internet security
- b To track physical locations only
- c To predict interests and generate profit
- d To provide free online services

3 What does the term 'digital footprint' refer to?

- a Physical traces left by internet users
- b Online activity and personal information collected
- c Digital marketing techniques
- d Social media tracking methods

4 What action has the European Union taken regarding data protection?

- a Banned online data collection
- b Created a general data protection law
- c Eliminated digital marketing
- d Restricted internet usage

5 According to the text, how do people typically share personal information online?

- a Involuntarily through tracking
- b Through physical documents
- c Voluntarily on social media platforms
- d By avoiding online services

6 What attitude does the text suggest people should have towards their online data?

- a Complete acceptance of data sharing
- b Total rejection of digital platforms
- c Demanding transparency and protection
- d Ignoring data collection practices

```
state={
  products: storeProducts
}

render() {
  return (
    <React.Fragment>
      <div className="py-5">
        <div className="container">
          <Title name="our" title="product">
            <div className="row">
              <ProductConsumer>
                {(value) => {
                  console.log(value)
                }}
              </ProductConsumer>
            </div>
          </div>
        </div>
      </React.Fragment>
    )
  }
}
```

7 What is the primary reason companies collect personal data?

- a To improve user experience
- b To generate financial profits
- c To enhance internet security
- d To provide free services

Let's share our opinions!

Share in **Padlet**...

(<https://padlet.com/utnquest23/opinion-writing-ie58okq9lqpogi9y>) a paragraph of about 80-100 words with your opinions/thoughts about **one** of the topics we have read here.

In the following slides, you have some questions you can use as **prompts** for your writing. Remember that they are prompts you do not have to answer the questions.

Writing

1. **Why do you think it is important to have women in science and technology fields?**
2. **Do you believe that everyone has equal opportunities in education today? Why or why not?**
3. **What challenges do you think women face when pursuing careers in science?**
4. **Can you share an example of a woman scientist (or any famous or important woman) who inspires you?**
5. **How does having diverse voices in science help solve global issues?**
6. **How do you think society benefits from promoting gender equality in science?**
7. **What role do you think young people can play in changing stereotypes in science and technology?**

Writing

1. **How do you feel about sharing your personal information online?**
2. **Have you ever worried about your privacy when using the internet?**
3. **What steps do you take to protect your data while browsing online?**
4. **Can you share an experience where you felt your privacy was compromised online?**
5. **How often do you read the privacy policies of websites or apps you use?**
6. **In your opinion, what are some benefits and drawbacks of sharing information on social media?**
7. **What do you think should be done to improve data protection for users?**
